

[credi2] is hiring:

Backend Developer (f/m/d)

Hiring from: Immediate
Workplace: Vienna, Austria
Hours: Full-time
Remote: Mobile working possible
Industry: Fintech

Who we are: We specialize in building and maintaining pay-later solutions that give customers a choice in how they pay online and offline: now, later or in parts. Currently, we are live with cashpresso, an easy-to-manage overdraft, and FINANCE A BIKE, enabling customers to part-pay bikes. For our latest project, we have implemented an innovative business model for device rentals in cooperation with our German partner and US tech giant Apple.

What you will do and what we offer: Joining us, you'll have end-to-end responsibility for our new and existing features: from (co-) planning and realizing new and innovative solutions to optimizing our established ones.

Your job will be versatile: you'll be engineering in agile sprints within flexible working hours. We want you to come up with your own ideas and are happy if you challenge ours, best done with taking on full responsibility for subprojects. Developing our modern banking app, you'll benefit from networking within an exciting start-up environment.

Good ideas are tested quickly: whatever we or you want to do, in principle we can. We have our own full-blown banking backend fusing lending and payment – so we have little legacy holding us back.

If you're curious, a self-starter and deliver without a lot of oversight, you'll fit right in. A minimum of two years' experience with Java development is desired. Solid Spring, JPA, Maven, Docker, Linux, AWS, and Postgres skills are beneficial.

Payment: We pay depending on qualification and skill set. Minimum salary according to Austrian collective agreement is EUR 2,740.81 PM.

Application: Interested? Please send your application to Katharina at jobs@credi2.com. 3 sentences of introduction and a CV or an informative XING/LinkedIn profile will do.
