---

# Quality Assurance Engineer (f/m/d)

---

**Hiring from:** Immediate  
**Workplace:** Vienna, Austria  
**Hours:** Full-time  
**Remote:** Mobile working possible  
**Industry:** Fintech

**Who we are:** We specialize in building and maintaining pay-later solutions that give customers a choice in how they pay online and offline: now, later or in parts. Currently, we are live with cashpresso, an easy-to-manage overdraft, and FINANCE A BIKE, enabling customers to part-pay bikes. For our latest project, we have implemented an innovative business model for device rentals in cooperation with our German partner and US tech giant Apple.

**What you will do and what we offer:** Joining us, you'll have end-to-end responsibility for our product quality: from creating, evaluating, and executing test plans to setting up testing processes together with our team.

Your job will be versatile: you'll drive continuous quality improvement of our products. We want you to come up with your own ideas and are happy if you challenge ours, best done with interacting closely with our developers and our product team.

Good ideas are tested quickly: whatever we or you want to do, in principle we can. We have our own full-blown banking backend fusing lending and payment – so we have little legacy holding us back.

If you're curious, a self-starter and deliver without a lot of oversight, you'll fit right in. A minimum of two years' experience with software testing along with a clear understanding of the testing process and fundamental testing techniques are must haves. Adequate knowledge of test automation tools and the ability to establish new testing processes (REST services & Web applications) are key. You'll further convince with your solid skills of BDD & TDD and a professional command of Agile software development.

**Payment:** We pay depending on qualification and skill set. Minimum salary according to Austrian collective agreement is EUR 2,740.81 PM.

**Application:** Interested? Please send your application to Katharina at [jobs@credi2.com](mailto:jobs@credi2.com). 3 sentences of introduction and a CV or an informative XING/LinkedIn profile will do.
